PAR-GOSA SPRINGS. COLORADO.

Beautifully located in the finest, part valley of the San Juan river, beow its rugged mountain course, and ust above its entering an inaccessible just above its entering an inaccessible canyon of cretaceous sandstone, is the great natural curiosity known by the Indians as Pah-Gosa or Boiling Water. The main spring is described by Lieutenant McCauly as the largest as well as the hottest boiling spring in the United States. Indian trails from all directions converge upon the banks, all deeply worn, the place having been from time immemorial one of great resort. Here, attracted by the healing properties of the water, different families, bands and tribes, have been accustomed to peacefully assemble, conceiv-

iles, bands and tribes, have been accustomed to peacefully assemble, conceiving the springs to be a special creation of the great spirit for the cure of the sick of all tribes, however afflicted.

In the neighborhood of the springs the river is a beautiful trout stream, with a fall of about fifty feet to the mile. The main continental divide is to the north and east, approximating the arc of a circle, with Pah-Gosa as its center. A spur of the snowy range, or Great Divide, separating the waters of the San Juan and Piedra tributaries, passes to the southwest, terminating in Pah-Gosa peak, 12,670 feet high—a clearly defined pyramid from the south, the San Juan and Piedra tributaries, passes to the southwest, terminating in Pah-Gosa peak, 12,670 feet high—a clearly defined pyramid from the south, and the most prominent point in the landscape. The springs lie on the shortest line of communication from the east to the lower San Juan country. The wagon road from Tierra Amarilla, North Mexico, to the Animas region, passes by them, and though not the shortest ronte, is the one most traveled, since it alone abounds in wood, water and grass. It is mainly along the route of the old Spanish trail, the great highway in olden times, leading from New Mexico to the Animas.

The principal springs lie upon the east side of the river in a contracted valley or park, a short distance above where the Animas road crosses the river. They are nineteen in number, and have a temperature above blood heat. They lie in au angle male by a sharp bend in the river and upon its left bank. On the opposite side, half a mile or more to the south, is a group of cold springs near the river. Less than half a mile down the river a small creek flows in from the east, the Ojo Frio, so called from the number of cold springs along its banks. Just below its mouth sharp mesas and masses of vertical cretaceous rocks with wooded summits close in upon the river, forming a canyon not yet explored. The r. M., I tound all the party sitting a canyon not yet explored. The r. M., I tound all the party sitting a canyon not yet explored. The r. M., I tound all the party sitting a canyon not yet explored. The r. M., I tound all the party sitting a canyon not yet explored. The

dioxide, and contain in solution calcium, sodium and magnesium carboniates, sodium and potassium sulphates, and sodium chlorids, the largest mineral constituent being sodium sulphate. Around the eastern edge of the water are a number of cavities which the Indians use as bathing houses. At the southern end is a vapor jet in a cavity, in which the natives extemporize a steam bath by means of a blanket. A series of careful observations in December gave a temperature ranging most able to throw a carload of lumber most able to throw a carload of lumber.

begged that the government should re-tain possession of the place, so that all persons, whether white or Indians, might come there and be healed. Lieu-tenant McCauley expresses the helief that at no distant day these springs are destined to become a place of great resort, and to play no mean part in the sanitary economy of Colorado.—[Scien-tific American.

Original Minds.

If Nero had lived in Detroit he If Nero had lived in Detroit he couldn't have been a tyrant, for every body would have agreed with him. Yesterday morning a citizen who desired to see how many people had opinions of their own on the weather started out by saying to a merchant:

"Awful hot, isn't it?"

"Yes—very hot," was the prompt ready."

The next man was a tailor and to him the citizen said: "Ever see such raw weather?"

"Never did-never did," was the answer.
The third man was a lawyer, and after a glance at the sky the citizen said:

"Looks now as if we would have a long spell of dry weather."
"Just what I was saying five minutes

ago," was the reply.

The fourth man was an alderman, and after a hand shake the citizen observ-

HE PLACE WHERE YOU CAN BUY THE CHEAPEST.

"I believe we shall have rain every day this week. Do you notice those clouds in the east?"

"Yes, I was watching them. I told my folks this morning we'd have all the rain we could take care ot."

The next man was a furniture dealer, and after a few words on the better times the citizen said:

"This is growing weather for corn?"

"Best kind of weather," was the answer.

A PUT-UP JOB IN MATRIMONY.

"I have been a subscriber of the News Letter for the last ten years, said a "broken-up" looking young man coming into this office yesterday and sitting down in front of the managing editor, "and I call upon it for aid and

The editor looked pointedly at the clock, and asked what he could do for "Why, I want you to hold up to pub-lic scorn and detestation a fellow called Mooney and a red-headed girl named

Mooney and a red-headed girl named Morrissey."
"Seandal case, eh?"
"A heap sight worse. You see, I was engaged to be married to that girl—her name's Maria—and Dr. Stone was to hitch us up the first of the month, so I asked this mean cuss, Mooney to be one of the groomsmen."
"Ill consented of carea?"

springs along its banks. Just below its mouth sharp mesas and masses of vertical cretaceous rocks with wooded summits close in upon the river, forming a canyon not yet explored. The river is well stocked with trout and other fish.

The geological age of the springs is

WHAT HE DESIRED.

While the President of a well known college was smoking a post praudial cigar the other day a shabily attired man stepped into his study and took a seat. "What can I do for you, sir?" inquired the President, looking up.
"My name is John Wilson Beaupoiling point.

"Ah yes, Beauchamp, French name that, ch? "Yes, sir; I was born in New

in 1836. "You want to enter your son here?"
"No, sir, but my wife's manden name was Jones."
"What is the nature of your busi-

"Well, go on."
"I just dropped in here to mention to you the fact that I have been drinking beer for twenty years every day."
"Well." "But now I have given it up. I never touch it now. It is not stimulating enough for me. I now swear by the gin cocktail, which I regard as the great civilizer of the nineteenth century. Indeed I do. I'll give you my word on that."

"I have no time to waste," replied the President, rather shortly. "I can swallow more gin than any other man in the country, sir, and I can hold it too. I can lie all over the deck

of Zack Chandler when you come down to demolishing gin cocktails."
"Well; what of that?"
"What of it?—what of it!" repeated

ap?"
"No, sir!" replied the president with great emphasis.
"Well, will you make me an LL. B.?
I wouldn't kick any at that."

"No, sir."

"All right, then; you and your college and your Faculty can go to thunder! I was going to send my two boys to your college, but now I won't. No, sir, I won't; I'll see you blowed first?—I'll put them at the shoemaker's trade instead?

wild as Senator Conkling when he drops some egg on his immaculate shirt-front.

NO 20.

When Cooley read the accounts of Paul Boyton's exploit in swimming the English channel, it struck him that he could improve a little on Boyton's life-preserver. He said he had invented an apparatus with which a map could walk on the surface of the wann, and with a little practice glide over it with the velocity with which a good skater skims over the lee. So he invited a party of us flown to the river one day to see him operate the machine. At the appointed that he is a small guibboat under cach arow. Then he strapped one on cach find, and we saw that the article was about four feet long, and shaped like a shallow soow. shallow seew.

As he prepared to lower himself over the edge of the wharf, he asked us to designate the point on the other side of the river at which we wished him to

THE WATER TERAMULIATOR

the river at which we wished him to land. He said it was immaterial to him whether he went one mile or six, up stream or down stream, because he could just hop along over that river like a swallow. His general idea was to produce a revolution in navigation, and to make men independent of steamers and other vessels when they desire to travel upon the water with rapidity.

Then he dropped into the stream with his scows, and started himself by holding on to the side of the wharf until he was ready to start. At last he said the

ing on to the side of the wharf nutil he was ready to start. At last he said the experiment would begin, and he strack out with his left foot. The front end of that particular scow scattled under the water, and as he tried to save himself with his right foot, the end of that scow also dipped down, and Cooley tambled.

The next minute he was hanging head downward in the river, with nothing visible to the spectators but the bottoms of two four-foot gunboats. The patent apparatus simply kept all the rest of him under water. Then a couple of men paddled out to him in a skift and hauled him in. Then we unbuckled his scows, took off his clothes, and rolled him over a vinegar barrel to and rolled him over a vinegar barrel to work the water out of him. In about an hour he came to, and attering a groan, he said:
"Where am I?"

We explained to him, and he asked: What drowned me?" We told him that he was injured by

we told him that he was injured by an attempt to revolutionize navigation, and he demanded; "How'd I try to do it?" We reminded him that he had started for a skim up the river with a frigate tied to each foot, and then he asked: "Where the dence are them ma-
